

**FSG-20/24
ADIV Series**

Column Type, 3-axis, Fully Automatic
Precision Surface Grinder

In-machine dynamic balancing

CHEVALIER[®]
Grinding / Turning / Milling

We shape your ideas.™

Crossfeed speed is controlled by AC servo motor for finer surface finish and finer accuracy

Column Type, 3-axis, Fully Automatic Precision Surface Grinder

Chevalier's FSG-ADIV Series of surface grinders has several design features to shorten your processing and non-processing preparation while delivering high-precision workpieces year after year—functions you might not expect on such affordable machines: iSurface control, variable speed spindle, constant surface speed, loading detection and in-machine manual dynamic balancing.

The control provides a grind cycle that has rough grinding, fine grinding, spark-out passes and an automatic over-head wheel dresser with compensation that can be added to fully automate the grind process.

This series of grinders also features tools to secure Big Data with Chevalier's exclusive iMachine Communications System™ (iMCS). This software package, combined with data analysis, enhances machine efficiency in the factory while enabling remote monitoring and diagnostics to track machine performance and identify potential problems before they begin.

The FSG-2060ADIV is shown with optional accessories.

Key Features and Benefits

In-machine dynamic balancing

By manually adjusting the in-machine dynamic balancing function, operators can reduce grinding wheel vibration and eliminate the surface workpiece ripple to improve grinding quality.

Variable speed spindle

The built-in driver controls spindle speed. Combined with the automatic dressing function, the driver provides constant surface speed regardless of the grinding wheel's changing diameter.

A higher level of precision, flexibility and functionality with in-machine manual dynamic balancing

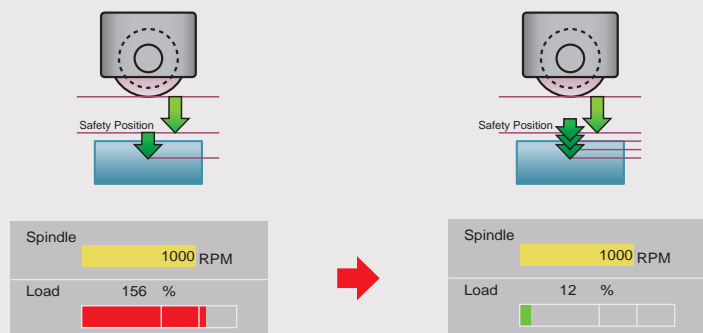

Automatic dressing on table (optional)*

When the grinder enters an automatic dress cycle, the table automatically positions itself where the diamond is set to dress and compensate according to operator settings.

Load force detection

Operator can measure the spindle load during the machining cycle, then utilize this data to determine at his or her own discretion whether the wheel requires dressing. If an abnormal load is detected, the spindle automatically moves up to stop the cycle.

Enhanced control system

Unlike PLC control boards, the PC-based control's powerful computing power enhances the HMI for more precise control. Combined with data analysis from network connectivity, it permits managers to improve production presses for higher output.

iMachine Communications System™ (iMCS)

iMCS is a comprehensive remote monitoring software that integrates with IoT functions on Chevalier's CNC machines to perform 24/7 data collection, utilization monitoring, data analysis, alarm history, maintenance and overall equipment effectiveness (OEE), all which help to avoid downtime and increases productivity. Additional PC and software are required.

Control Features and Benefits

All new iSurface control

FSG-ADIV Series controls are PC-based (NC control), high specification industrial units. The high-response AC servo motors on the Y and Z axes are designed to improve accuracy.

The control is equipped with a variable frequency drive system that automatically adjusts the grinding wheel's line speed. A magnetic encoder

accurately detects spindle load and correctly grasps the spindle cutting load.

A built-in acceleration gauge monitors the grinding wheel's balance at all times. If the wheel becomes unbalanced the operator will be notified to rebalance the wheel.

The control's variable frequency drive system automatically adjusts the grinding wheel's line speed

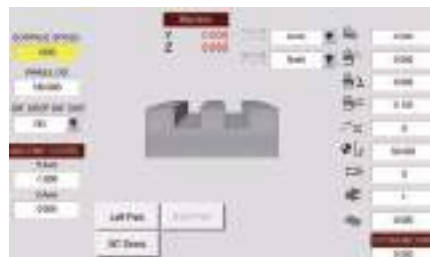

Perfect HMI control

The control's standard equipment includes a 10.4" high-color touchscreen with HMI.

In-Machine Dynamic Balancing

Plunge Grinding Mode

Automatic Dressing on Table (optional)*

Surface Grinding Mode

Automatic Overhead Dresser with Compensation (optional)

Crisscross Grinding Mode

*U.S.A.: standard

Wheel Dressing

A normal dressing mode wastes time by cutting in air. The iSurface dressing mode never cuts air because the diamond is in constant contact with the wheel to minimize dress time.

Auto dressing modes (optional)*

Conversational graphic automatic wheel dressing modes can be linked with any—or all—grinding modes.

*U.S.A. Auto dressing is standard

The FSG-2460ADIV is shown with optional accessories.

On Table Dressing

The wheel dressing mode ensures the grinding wheel remains true for consistent grinding accuracy

Applications

The FSG-ADIV Series has built-in long-term value in process-based applications

Machine Construction

Spindle design

The spindle is supported by six Class 7 (P4) super-precision, angular-contact ball bearings, which have been accurately measured, selected and preloaded and assembled in a temperature controlled clean room. The spindle is permanently lubricated and requires no maintenance. The large diameter spindle is precisely balanced to ensure accuracy.

Longitudinal slide ways

The FSG-20ADIV Series machines have one "V" and one flat table guideway laminated with Turcite-B and hand scraped with precision to ensure high accuracy. Continuous lubrication is also provided to ensure smooth, stick-slip free movement of the table and accurate positioning for wheel dressing.

The FSG-24ADIV Series machines feature a double "V" guideway laminated with Turcite-B anti-friction material for smooth and stable longitudinal movement. The table is designed to fully support the front base of the machine, providing increased accuracy.

Lubricated "V" and flat guideways ensure high accuracy and precise positioning with stick-slip free movement.

FSG-20ADIV series offers cross-feed transmission mechanism

An enlarged precision ballscrew with backlash adjustment device is driven by an AC motor. The encoder-type stroke setting key allows cross-feed reversal points to be set from operator's control panel, which increases efficiency.

Elevating transmission mechanism

The wheelhead, travelling on a preloaded hardened and ground guideway system, is driven by a hardened and ground ballscrew and an AC servo motor, providing high torque, speed and accurate positioning with minimum increment of 0.001 mm (0.00001"). A manual pulse generator (MPG) is standard for easy operation.

High-precision hardened and ground ballscrew drives the wheelhead and guideway system with positioning accuracy at a minimum increment of 0.001 mm (0.00001").

A full line of standard and optional accessories adds flexibility to FSG-ADIV Series grinders

Accessories

Standard accessories

- Wheel flange (optional reserve wheel flanges available):
Clamping width 22~38mm(0.9"~1.5")(FSG-20ADIV)
Clamping width 43~50mm(1.7"~2")(FSG-24ADIV)
- Grinding wheel (OD x Width x Bore):
Ø355x50xØ127mm(Ø14"x2"xØ5")(FSG-20ADIV)
Ø405x75xØ127mm(Ø16"x3"xØ5")(FSG-24ADIV)
- Splash guard
- Stylus
- Double-sided water baffle (FSG-24ADIV)
- Heat exchanger for electric cabinet
- Hydraulic tank and oil cooler (FSG-24ADIV)
- Leveling pads:
FSG-2040/2060ADIV: 16 pieces,
FSG-2440ADIV: 14 pieces,
FSG-2460ADIV: 18 pieces,
FSG-2480ADIV: 20 pieces
- Leveling screws and nuts:
FSG-2040/2060ADIV: 16 sets,
FSG-2440ADIV: 14 sets,
FSG-2460ADIV: 18 sets,
FSG-2480ADIV: 20 sets
- Toolbox (includes balancing arbor, wrench, hex head wrench)

Optional accessories

- Chuck control
- Electromagnetic chuck
- Diamond dresser
- Coolant system with auto paper feeding device
- Coolant system with auto paper feeding device and magnetic separator
- Hydraulic tank and oil cooler (FSG-20ADIV)
- Y/Z axis linear scale
- Parallel dressing attachment (hydraulic type)
- Over the wheel automatic straight-line dressing and compensation device.
- Automatic table dresser with compensation (includes special hydraulic oil tank*)
- Double-sided water baffle (FSG-20ADIV)
- Balance stand roller
- Work lamp

*U.S.A.: standard
